

Connect to Central. Then prove you can't be fooled.

Hour 6

Farm Central Command has opened a dedicated database for your unit. Connect to it, pull the **selfcare message** column, and display it on your dashboard.

A connection to central database MySQL is provided. Central database will be pre-populated with a general design.

Teams can use this design or their own design but minimum is to maintain previous require structure of 1 table called "sensor", and 2 columns "sensor_values", "created_at".

Below is all the database credentials you needed :

- DB Name : **hackathonGroup10**
- Username : **hGroup10**
- Password : **teamGroup10**
- Central Server : **192.168.98.50**
- MQTT PORT : **1883**

Additionally, there will be a MQTT topic for "Selfcare message" that team must connect and able to display to their dashboard.

MQTT topic subscribe & publish:

- **hackathon/{teamName}/test**
- **hackathon/{teamName}/verify :: use to perform self-verification MQTT Signal to Central Server**

MQTT topic subscribe only:

- **hackathon/broadcast**

"Blind trust of incoming data is a vulnerability. A system that displays whatever it receives , corrupted or not - is not a secure system."

Connect to Central. Then prove you can't be fooled.

Hour 6

Your Objectives :

- Able to connect to central database
- Data synchronization between team's raspberry pi vs central station
- MQTT signal verified

Your Submission :

- Submit your Entity Relational Diagram
- Screenshot of dashboard that showing the selfcare message
- SVN commit --username [username] -m "Challenge1 : Completed"
